## Knowledge Without Borders: Israeli Specialists Train Makueni's Frontline Heroes

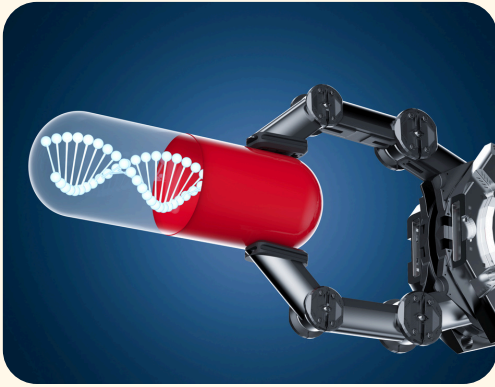

Over 50 healthcare professionals across Makueni County recently completed the intensive **Pediatric Emergency Skills Seminar**, inaugurated last week by Ambassador Gideon Behar and Governor Mutula Kilonzo Junior and facilitated by world-class specialists from Israel's Hadassah Medical Center. Through hands-on critical simulations exercises and practical demonstrations, doctors and

nurses mastered life-saving techniques, including the use of **portable ultrasound technology** for rapid, on-site diagnosis. This partnership doesn't just transfer skills—it builds a sustainable foundation for pediatric care that will save young lives across Kenya for years to come. The initiative also highlights Israel's commitment to Kenya through long-

term investment in local medical capacity and is part of a broader vision that includes fellowships at Hadassah Hospital in Israel and ongoing tele-mentoring for Kenyan specialists.

## Israel reaches key milestones in sustainable hi-tech

The "Start-Up Nation" has long been a leader in high-tech, but Rehovot-based Evogene is currently proving that the next great frontier is the intersection of biology and artificial intelligence. As of May 2026, Evogene has solidified its position as a powerhouse in computational biology. By integrating advanced AI agents through an expanded partnership with **Google Cloud**, the company is now designing novel small molecules for pharmaceuticals and sustainable agriculture at an unprecedented scale. For further reading go to [evogene](#)

Israeli leader Netafim has just launched a new **AI-powered dosing 5G product range**. These systems use precision sensors and real-time data to automate "fertigation"—the delivery of both water and nutrients directly to plant roots. Reports from the past week show

that these systems are the primary driver behind Israel's "Desert Project", which is currently transforming the arid Negev region into a fertile agricultural hub. For more details go to [Netafim](#)
